Revenue quality depends on trading engagement, earning balances, and expense conversion

2027 BASE REVENUE

$5.87b

Analyst forecast

2027 OPERATING MARGIN

43.5%

GAAP analyst forecast

2027 SCENARIO RANGE

$4.41–6.74b

Downside to Upside

- Measured 2024 comparable-product activity contributed $621m of $862m transaction growth.
- 2027 Base interest/balance revenue is 36% of total; disclosed Gold is only 4.5%.
- Base margin depends on revenue rising faster than the six-category expense plan.

Major risk: trading or crypto normalization alongside weaker realized yields.

Sources: SEC filings; Robinhood releases; audited analyst model. Forecasts are not company guidance.

Revenue rose 52% in 2025 as customers and assets expanded; expense commitments are rising

2026 Q2 REVENUE

$1.31b

Reported quarter

FUNDED CUSTOMERS

28.4m

2026 Q2 reported

PLATFORM ASSETS

$368.7b

2026 Q2 reported

2026 is two reported quarters plus two forecast quarters; it is not a reported full year.

Sources: FY 2025 10-K/A; Q2 2026 10-Q; Phase 3 historical dataset.

Measured trading activity drove most 2024 transaction growth, with later scope less comparable

$862m total 2024 vs 2023 transaction-revenue increase; bridge reconciles exactly.

- Customer scale and monetization contribute, but measured activity dominates this comparison.
- The 2025 bridge retains new products and acquisitions in an explicit residual.

Sources: Phase 3 exact transaction-revenue bridge; 2025 10-K/A.

Assets grew faster than customers, but acquisitions and market moves limit organic inference

CUSTOMERS

23.4m → 27.0m

2023 Q4 to 2025 Q4

PLATFORM ASSETS

$103b → $322b

Revised 2025 Q4: $322.1b

ASSETS / CUSTOMER

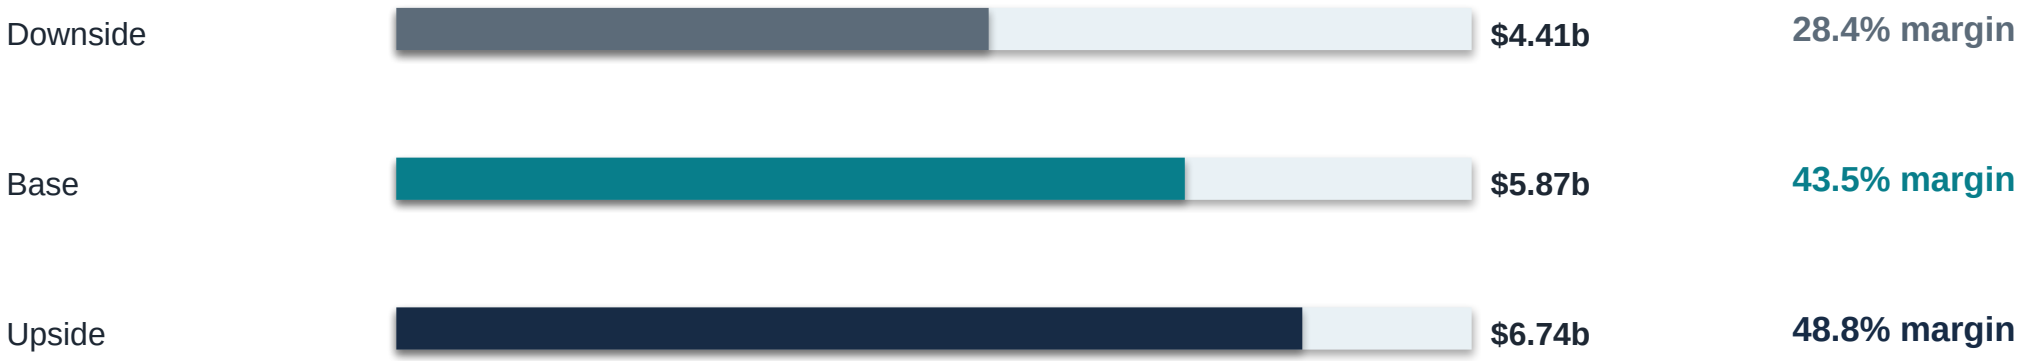

$4,385 → $11,930

Derived; rounded

- Customer assets rose more rapidly than funded customers, creating more balance potential.
- Reported asset growth includes acquisitions and market value changes; it is not organic deposits.
- The forecast links only captured earning balances and activity to revenue, not all platform assets.

Sources: FY 2025 10-K/A; Phase 3 monetization table; acquisition adjustments described in structural breaks.

Base reaches $5.87b 2027 revenue at 43.5% margin

Base 2028: $6.33b revenue at 43.9% operating margin.

- Base keeps normal-quarter additions near 0.3m and deposits near $17.7b.
- Options activity and balances carry growth; expense growth remains below revenue growth.

Sources: audited Base/Upside/Downside operating model; 2026 is mixed actual/forecast.

Transaction pricing and rate pass-through can move 2027 profit by hundreds of millions

TRANSACTION PRICE -20%

-$613m

2027 operating-income effect

2027 Base mix: 52% market activity · 36% interest/balance · 4.5% Gold · 6.9% unclassified.

The $899m all-component +100 bp yield stress includes Cash Sweep. It is not the policy-rate case; Robinhood excludes sweep from its disclosed short-term rate sensitivity.

Sources: defined 2027 Base shocks; rate audit against June 2026 10-Q disclosure.

Each growth path needs a different operating condition; none has public-data initiative ROI

Customer & asset scale

+$37m revenue at +25% net additions

Additional customers must monetize beyond near-term marketing costs.

Transaction engagement

+$274m revenue at +20% options units

28.7 options contracts/customer offsets a modeled -50 bp rate case.

Balance / Gold monetization

+$85m revenue at +50% cash capture

Net yield and captured earning balances must persist; Gold remains modest.

A $69.9b quarterly deposit threshold to offset -10% transaction pricing is outside recent history.

Sources: audited decision thresholds and defined sensitivities; no product ROI is inferred.

Protect monetization, deepen earning balances, and gate spend to realized profit conversion

- 1. Protect trading engagement and realized monetization, especially options, while planning for activity swings.
- 2. Turn deposits into earning balances and deepen Gold relationships, with net spread and credit-loss discipline.
- 3. Gate technology, marketing, and general spending against realized revenue and operating-profit conversion.

Two risks

- Transaction activity and blended crypto monetization can normalize faster than the Base Case.
- Lower realized interest yields or faster credit and fixed-cost growth can erase operating leverage.

Monitor additions; deposit capture; options units/pricing; crypto bps; net yield and expense/revenue.
